

This heatmap displays activity levels over a 7-day period. The vertical axis represents time in 24-hour increments, while the horizontal axis lists the days of the week. Activity is generally low during the night and early morning hours across all days. A significant increase in activity is observed starting around hour 16, peaking on Thursday and Friday where activity reaches its maximum (red) for several hours. There is also a notable peak in activity on Saturday around hour 18.
