

The heatmap displays the distribution of the number of days per month across different months and years. The x-axis represents 'Days of Month' (1 to 31), and the y-axis represents 'Months - Years' (January 2021 to December 2022). The color scale ranges from 20,000 (light blue) to 120,000 (dark purple). The heatmap shows a clear pattern of high values (dark purple) for months with 31 days, particularly in the middle of the year (June, July, August, September). The values are lower (lighter blue) for months with 30 days and lowest (lightest blue) for months with 28 days (February). The distribution is relatively consistent across the years shown, with minor variations in the intensity of the colors.
